DONNY PHAN   Full Stack Web Developer

October 14, 2022

Dear Steven Zolnierczyk ,

I'm interested in the Junior Front End Developer opening at Iteration Matrix Ltd.

I'm coming from an Engineering background with 9 years of experience in Mechanical Design, Project Management, Marketing, and most recently a Diploma in Full Stack Web Development from Lighthouse Labs. My cross-disciplinary experiences have given myself more tools to solve problems. An example would be in my previous company Spec Furniture, where I noticed redundancies in technical drawings. As someone with prior coding experience and seeing it done before, I initiated and scripted smart drawing tools to decrease turnaround time up to 90% less (60 minutes to 5 minutes).

My portfolio can be found here - https://donthephan.com

I want to share with you my Final Project from Lighthouse Labs. Titled "StoryTime" (GitHub link here), the mobile first App helps connect book readers and listeners together, so they may read/listen to each other, whether it be online or in person.
Through this project I gained experience:
- working in a 3 person web development team.
- using New technologies I hadn't used before - Tailwind CSS, Daisy UI, Socket.io, PostgreSQL, Figma and Trello.
- solidifying technologies I'd already learned - React, HTML & CSS, Node.js, Express, Git/GitHub, API's and Heroku.
- using Agile methodology with daily scrum meetings.
- wireframing and setting up the Web Chatting interface.

Thank you for taking the time to review my application.
Looking forward to connecting with you.

Best regards,
Donny Phan
